# Eren Sarıbay

**Software Developer**

eren99srb@gmail.com | İstanbul, Türkiye | erensaribay.com | github.com/Eswact | linkedin.com/in/eren-saribay

## About

I'm a frontend-focused software developer with 3+ years of experience, building products end to end across web and mobile. I build web applications with **Vue, React and Next.js**, and work on API integration and the backend with **Node.js and .NET**. More recently I've built mobile apps with **React Native and Expo** for **Android-based POS/kiosk devices** and **AI-powered products**. I have hands-on experience with **web scraping, real-time data streaming, cache management, LLM integration and Bluetooth/BLE**.

## Technologies

| | |
|---|---|
| ***Frontend*** | Vue.js / React / Next.js / TailwindCSS / JavaScript / TypeScript |
| ***Backend & APIs*** | Node.js / Express.js / .NET / FastAPI / REST APIs / SSE |
| ***Databases & Storage*** | MongoDB / SQLite / MSSQL / Redis |
| ***Mobile*** | React Native / Expo / Cordova / PWA |

## Experience

### Software Developer — NSA Teknoloji (Çamlıca Barkod)

**February 2023 – Present / Istanbul, Türkiye**

*Çamlıca Barkod's software unit became a separate company, NSA Teknoloji, in 2024; I continued with the same team.*

- *Built new features, UI/UX improvements and performance optimizations for live enterprise apps with **React, Next.js, Vue.js and jQuery**; grew a frontend role into backend and mobile work.*
- *Built the frontend of a **.NET Core multi-channel e-commerce management platform** that manages products, stock and orders from one panel through marketplace API integrations. Shipped new features and UI improvements to a pre-accounting product used by hundreds of customers.*
- *Turned scraping systems that collect data from 8 e-commerce platforms into API services with real-time streaming and caching, using **Puppeteer, Cheerio, Node.js/Express, SSE and Redis**, and integrated them into existing apps. Packaged reusable DataTables-based table components as npm packages.*
- *Built **5+ mobile apps** with **Cordova, React Native (Expo) and TypeScript** for **Android-based POS/kiosk devices** and **AI-powered products**: computer-vision product recognition, voice ordering, meeting analysis (Meetnal) and voice-first task management (Warbly). Worked on speech-to-text, LLM-based intent extraction, POS payments, QR login and native Android integrations, and ran the products' **branding** and **release** processes.*

### Intern — Çamlıca Barkod

**August 2022 – September 2022 / Istanbul, Türkiye**

- *Built a call center automation web app with **.NET MVC and MS SQL Server**.*
- *Built interactive tables and reusable frontend components with DataTables.*

### Intern — WhiteCAD

**July 2022 – August 2022 / Istanbul, Türkiye**

- *Built an interactive 3D wardrobe in **Three.js** with scene setup, lighting, animation and OrbitControls.*

## Education

### BSc in Computer Engineering

*Bilecik Şeyh Edebali University | 2019–2024 | GPA: 3.32*

## Languages

*English — Professional Working Proficiency (B2)*
*Turkish — Native*

## Selected Projects

### Fibi — Voice-First Personal Finance & Inventory App

*React Native (Expo) - TypeScript - SQLite - Node.js - LLM*

- Built a mobile app that turns a single spoken or typed sentence ("bought headphones for 3700 lira") into both an expense and an inventory record. Input is first handled by an on-device rule-based parser; ambiguous sentences are routed to LLMs through a multi-layer fallback chain, with amount and date always verified in code.
- Includes installment, subscription and monthly cash-flow planning, investment tracking with live prices (stocks, gold, FX, crypto), and expense suggestions from bank SMS. Local-first architecture keeps all data on-device in SQLite, with JSON/CSV backup and restore.

Download the Android APK

### Barcode Lookup API — Barcode-Based Product Lookup

*Node.js - Puppeteer - Cheerio - Redis - SSE*

- Developed a REST API that fetches barcode-based price comparisons and product information from 8 Turkish e-commerce platforms.
- In price comparison mode, all platforms are scraped in parallel and results are streamed in real time via SSE. In product info mode, a "first-found-wins" strategy returns results quickly. Results are cached with Redis.

### Meetnal — Meeting Recording & Analysis App

*React Native (Expo) - OAuth - i18n - Whisper - LLM*

- Built, while working at NSA Teknoloji, a mobile app that records a meeting, sends it for analysis and shows the report, with its summary, decisions, action items and scores, on the phone. Recordings are transcribed on the server with Whisper and analyzed by an LLM, and reports open offline; supports sign-in by QR, short code, Google or Apple, and seven languages.

Google Play — Meetnal

### Digital Signage — Screen Management System

*NestJS - Next.js - Kotlin (Jetpack Compose) - WebSocket - Docker*

- Built end to end a real-time digital signage system that sends lightweight JSON documents instead of video files to Android screens, which render them with templates: the backend (NestJS + WebSocket), the admin panel (Next.js) and the native Android app (Kotlin/Compose).
- Features multi-tenant organizations and teams, content scheduling, offline playback of media cached on-device, and a Docker Compose + Caddy deployment with automatic TLS.

github.com/Eswact/digital-signage

### Warbly — Voice-First Task Assistant

*React Native (Expo) - Node.js - Whisper - LLM - SQLite*

- Built, while working at NSA Teknoloji, a mobile app that turns what you say or type into a task, with its date, time and subtasks. Audio is transcribed on the server with Whisper; the LLM only produces a fixed-shape intent, while dates and list changes are resolved in code. Includes an undoable action history and a home-screen widget.

App Store — Warbly

Google Play — Warbly

## Other Projects

**Promotional Websites**

*Vue - Next.js - i18n - SEO*

nsasoft.com.tr | fibi-app.vercel.app | shood-introduction.vercel.app

**Wardrobe 3D — Interactive 3D Wardrobe**

*Three.js - JavaScript*

wardrobe-3d.netlify.app | github.com/Eswact/wardrobe-3D

**Scale POS — TamPOS Scale Interface**

*JavaScript - jQuery - Cordova*

scale-pos.netlify.app | github.com/Eswact/scale-pos

**BLExpo — Bluetooth Developer Toolkit**

*React Native (Expo) - BLE - Classic Bluetooth - Android Intent Integration*

github.com/Eswact/blexpo

**DataTable Plugins (npm)**

*JavaScript - jQuery - DataTables - npm*

github.com/Eswact/datatable-responsive-modal | github.com/Eswact/datatable-visibility-settings

**VOIDRUN — Mobile Game**

*Godot*

github.com/Eswact/voidrun
